

HOW TO TURN OFF SENSITIVE CONTENT ON TWITTER

Regardless of why you use Twitter, it is easy to come across sensitive content in your feed. More often than not, we see "This Tweet may include sensitive content" or "The following media may contain sensitive material". In this article, we will go over why Twitter may mark your content as sensitive and explain how to turn off sensitive content on Twitter.

Why Twitter Marks Your Content as Sensitive

When Twitter gives a sensitive warning, it means a tweet contains graphic violence, NSFW, or hateful comments which may harm others. You have the choice to view the content after receiving this warning on Twitter. Furthermore, you can view sensitive content on Twitter by simply changing the settings. So let's see why Twitter might give sensitive content warnings to your tweets.

Graphic Violence

According to Twitter's terms of service, any sort of violence, including physical harm, blood, and injury, is graphic violence. A person can report a tweet that contains extreme violence and blood if they notice it.

NSFW Content

NSFW content on Twitter refers to any explicit content that contains nudity or sexual acts. This is why Twitter sends out a warning to its users if there is any potential adult content that could cause problems in the community.

Hateful Comments

When a user tweets something that promotes hatred toward any race, religion, nationality, or gender, that is automatically labeled as sensitive content. Before allowing members to view a tweet that contains racism, misogyny, or ableism, Twitter issues a sensitive warning.

How to Let Twitter Display Sensitive Content on Desktop/Laptop

Twitter has a guide on its browser to offer a better user experience to members. You may simply follow these five steps to turn off sensitive content on your desktop or laptop:

Log into your Twitter account from any browser on your desktop or your laptop.

Click on the “More” icon in the sidebar menu.

Go to “Privacy and safety” settings.

Click on the “Content you see” section.

Once the new tab opens, you can tick the “Display media that may contain sensitive content” box. Note that you have to check this box if you prefer to see sensitive content on Twitter.

How to Let Twitter Display Sensitive Content on Mobile Phone (Android/iPhone)

Click on your profile icon and navigate to "Settings and privacy".

Once the tab opens, you will see the "Privacy and Safety" option. Click on it.

Click on the "Content you see" section.

Enable the "Display media that may contain sensitive content" box.
